

Module 4 Contribution Journal

ITAI 1371 - Machine Learning
Neural Crew
Module 4 - Exploratory Data Analysis

Submitted contributions compiled by the team lead.

Patrick

For Module 4, I worked through the Exploratory Data Analysis lab and completed the required sections of the notebook. I ran the code and reviewed the outputs to make sure everything worked correctly. I also completed the student experiments using the Titanic dataset, including comparing survival by port of embarkation and fare. I answered the Knowledge Check questions based on what I learned from the graphs and data. I also helped make sure my completed work was ready to be shared with the group.

Viviana

For this assignment, I completed my assigned portion of the lab and contributed my individual work to the Neural Crew team project. My contributions included completing and reviewing my work in Jupyter Notebook, verifying that my portion was working correctly, and preparing my files for inclusion in the team's final submission.

I also assisted with organizing the team's GitHub repository and coordinating the collection of team members' work. I helped establish a pull request workflow so individual contributions could be added to the repository while maintaining an organized record of the team's submissions.

In addition to my technical contribution, I communicated with team members regarding the files needed for the final project and worked to ensure that the required materials were available for compilation.

My primary contributions included:

- Completing my assigned lab work.
- Reviewing and verifying my Jupyter Notebook work.
- Preparing and submitting my individual project files.
- Assisting with the organization of the team's GitHub repository.
- Coordinating the collection of team member contributions.
- Helping maintain an organized workflow for the team's final submission.

Levi

No separate contribution statement was included in the materials provided to the team lead.
